Power Supply

Fast, Low Cost and Ultrasonic Technology
for Flexible Welding Processes

ERUJ-06

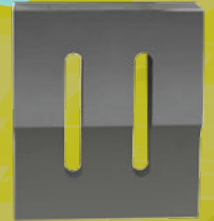

Digital Ultrasonic Generator

High frequency 15 kHz used in mask production Available with 2600 W Power Output, Used for full automatic welding mask ,edge , slicing and roll forming for KN95 masks and 2 years warranty.

- Ability to High Production
- Continuous Welding Process
- Non-Contact Welding and Weaving
- Automated Easy Integration
- Production Processes
- Soft and Elastic Surfaces
- Skin-Friendly Products

Ultrasonic Generator

Horn Mould

Ultrasonic Welding Transducer

TECHNICAL SPECIFICATIONS

Model	: TOCHI - ERUJ-06 Digital Ultrasonic Generator
Frequency	: 15kHz
Ultrasonic Power	: 2600W
Energy Input	: AC 220V, 50 Hz
Converter	: Korea Technology LBT Piezoelectric Welding Tip
Extra Detail	: Fully automatic welding mask, edge, slicing and roll forming for KN95 masks using for.
Digital Generator	: Continuous welding mode! * Used for manual or semi-automatic mask machine continuous welding mode. * Continuous welding used for automatic mask machine mode. * Continuous welding mode for fully automatic. * Generator third generation intelligent automatic frequency tracking and increase.
Advantages	: - Generator is the third generation of intelligent automatic frequency tracking and boosting; - Intelligent circuit layout design and wiring and professional for better control source IC programming; - LBTTransducer with piezoelectric ceramics more stable ultrasonic energy. - It is widely used in the market. stable quality. Material and production costs it is relatively expensive. material is rather scarce.
Dimensions	: Generator: 385x220x110 mm Horn: 110x20mm or 200x20mm
Gross weight	: 14 kg.
Package Size	: 385x220x110 mm
Package Content	: Ultrasonic Generator, Transducer, Horn, AC Cable, Trigger Cable
User guide	: There is
Warranty	: 2 years
